In this activity , we will explore osmosis by looking at a dataset produced by a classic classroom experiment. On It uses pieces of potatoes that are placed in six different water solutions each with a different concentration of solute. The solute ³ sucrose and the concentrations are measured in units of much. The solutions do not range from one solute to a high concentration of solute and are 0.0 (distilled water), 0.2, 0.4, 0.6, 0.8 and 1.0 molar sucrose. Six solutions at night. The next day, the potato pieces are removed from the solutions, dried and their final masses are recorded. Each row in this ordered dataset contains one observation for a single piece of potato. Each column in the data set Á is a variable and the cells in that column are the values of that variable. The variables recorded for each potato piece are the name of the laboratory group, the sucrose concentration (molaritÁ), the initial mass (G), the final mass (G) and the mass change (%). To see a video clearly illustrating and explaining the general procedure for this lab, watch Paul Andersen's Bozeman Science video Walkthrough: 1. Click the Yellow Make a Graph button to view your details. Choose the scatter diagram icon and show the sucrose concentration (molar) on the X axis and the mass change (%) on the Y axis. You can add descriptive statistics as media and medians by checking the box just to the right of the graph. Observe the patterns in the data: 2. What are the independent and dependent variables in this experiment? 3. How does mass change (%) change with sucrose concentration (molaritÁ)? 4. What substance moved through the cell membrane in this activity? What is the specific name of the movement in terms of this substance? 5 Now, change the variable called sucrose concentration (molaritÁ) to a numeric variable with the drop-down menu just below the variable name near the top of the page. oilgem oilgem li "A lauQ .ocifary led artsed a oirporp allesac al odnallortnoc otnemattada roilgim led enoisserger id aenil anu ignuigga .enifnI .wohS etnasIup lus cilc odneac ocifary la ovoun id oilgmuigga odnazillitu isomso id otnemirepse ortsov li etnarud itneduts ilged inoizavresso el .Aredlug oroval id oilgof otseuQ ybntnemirepxE seotatop ni sisomsO.atrac id oilgof %ÁÁ id eroiretsop e eroiretna etrap allus attada is enoizangessa aretni' L ,inoisulcnoc ilibissop el e itatlusir i eretucsid e erazzilana ³3 onroIG .Ihad ereilgoccar ² onroIG .eremac el eritsella ¹ onroIG .assam id otnemalbmec la esab ni isomso id ossat li e atulos enoizartnecnoc al art enoizalae al etnemalbmereps animetred baL sisomsO eroC otatop II ybbaL sisomsO eroC otatoPkoOL .ittodorp id oicnal e .seibeerf ,itnoc ivouu iojm i acric erepas a omirp li eresseEatenaiip ortsou lus ativ al azneulfni isomso'l emoc id amehcs onU etatap id oirotarobaL .2isommog isro id oirotarobaL .1onodnerpmoc inoizel eL .isomso'l eredeve rep Ilaer ilategev ehullec onnaresu itneduts irtsov i oirotarobal odnoces leN .inoisnemid id atemuaa osro'l emoc eredeve rep isommog isro id oirotarobal ocissalc li "A oirotarobal omirp II .itadiug irotarobal itseuq ni isomso id ossecorp li erangadaug id icilef onnaras itneduts irtsov I .isomso'llus oecil led ezneics id itneduts irtsov ia erangesni rep irotarobal EUD occE ybbal. otatop' dna raeB ymmuG SISOMSO .amirpetna atseuq ni atartsom "A non 3 anigaP atiturg amirpetna'nu odneggel iaTS moc.moorrsalcatad@ofni liamE .atseihcir us itnangensi ilq rep elibinopsid atsofsir id evaihC .63:5 ella aizini etatap id oirotarobal led enoizageips aL .oediv sisomsO dna noisuffiD :1 baL ygoloiB PA sÁ ÁeAnesrednA luaP etnemaviv omailgisnoc ,isomso e enoisuffid id enoizageips adipar anu reP .eram ni Á odnauq eram id auqca'l ereb etetop Á @Ahcrep etageips ,itad itseuq noc itartsulli ipicnirp i odnazillitU .7:enoizatsetnoc id adnamoD ?olrepas a iaf emoC ?ehcinotopi/ehcinotrepi onare inoizulos ilauQ ?atatap id alullec anu a ottepsir .Aticinotosi'lla aniciv 'Aip "A enoizulos elauQ 6 .amits elat id avorp anu onos itad i odom ehc ni erageipS ?atatap id alullec anu id onretni'lla otulos id elarutan enoizartnecnoc al rep of potatoes. Cell homeostasis laboratory (osmosis) with dialysis tubes and sugar solutions. High school membrane biology assays of the Onlicell Bio4u membrane can be used in introductory or advanced biology. This product includes four assays reviewing the structure and function of the plasma membrane. This may be used as a simple task at home or as an addition to the unit test mobile phone. Students should cover the phospholipid structure and the use of proteins as channels and receptors. Each of the four essays includes a column for a fair and easy score. The following topics are evaluated: Bee structure/function: showing 1-11 of the results of the results
